Rope Grid 1, 2014

Silver gelatin prints

David Maisel Overflight, 2014

Google Earth printouts

These maps were used by the artist before his visit to coordinate airspace without the use of Dugway's pilots or airplanes.

Tower Grid, 2014

Airforce Target Grid Building 2, 2014

“This singular building is designed for the sole purpose of being seen from above by Air Force pilots as they make their way over Dugway in fighter jets at extreme speed, *en route* to the Utah Test and Training Range for training in air-to-air-combat and air-to-ground live practice bombing. The building becomes an abstraction, a marker, a system of measurement...” Quote by David Maisel from the Haines Gallery exhibition titled “David Maisel: Proving Ground.”

Aerosol Dissemination Chamber, Whole System Live Agent Test Chamber, 2014

This facility is used to test protocols for handling live biological agents, such as weaponized diseases.

"This image depicts the heart of WSLAT, the interior of the Aerosol Dissemination Chamber where test samples are exposed to toxic aerosol clouds contaminated with biological threats such as anthrax and the plague." Quote by David Maisel from the exhibition titled "David Maisel: Proving Ground" at the Haines Gallery.

Reference Module Interior, Whole System Live Agent Test Interior, 2014

This is a photograph of the interior of a reference module, a contained unit for chemical testing, with protective gloves at Dugway Proving Ground.

Dugway Proving Ground Maps, printed 2014

Jack Rabbit Test 1: 10-ton Chlorine gas release dispersal cloud, 2016

This test, conducted in 2010, measured how fast and how far poisonous gas could spread from the crash of a railcar carrying the liquified toxin by exploding a canister of it within a grid.

Jack Rabbit II Test: Drone Footage Extract, Aerial View Plum Behavior

The five images of the Jack Rabbit II tests were extracted by the artist from drone footage sourced online.

"The testing was conducted in a remote part of Dugway Proving Ground...In 2016, the tests continued, using only chlorine. They were dubbed "Jack Rabbit II." Multiple releases of ten tons of chlorine were detonated onto an urban test grid, simulating a worst-case scenario. Nearly one hundred tons of chlorine were released into the atmosphere during Jack Rabbit II." Quote by David Maisel from the exhibition titled "David Maisel: Proving Ground" at the Haines Gallery.
